Introduction

“Covering the sky one yard at a time”

Founded in 1988, Chung Ming Textiles manages the industry attentively, treats employees with heart, and commits to strive toward aesthetics of functional textiles.

We implement our professional R&D strategy into development, use digital technology, innovative materials, and core manufacturing setting to produce technologically functional fabrics. These differentiates us from the market and helps to fulfill clients' needs. We strive for textiles variation, innovation, fashion, and comfort by not sticking to rules nor imposing limitations. We are committed to high-performance, high-technology, high-quality, high-service, and high-efficiency. Nevertheless, we focus on sustainable development in Taiwan by altering our operation, energy consumption, and etc.

Export Competitiveness

- I. Advantages on international market: instead of following the trend and entering the textiles market in Vietnam and China, we boldly chose to move toward Third World countries, such as Ethiopia, Haiti, and etc. Through African Growth and Opportunity Act (AGOA) and Haitian Hemispheric Opportunity through Partnership Encouragement (HOPE), we are able to provide more economic benefits for our partners. In addition, we also provide one stop service, which is to assemble containers with all materials needed for making a garment.
- II. Specialization in fabrics for sports uniform: we adhere on using raw materials from Taiwan and manufacturing in Taiwan (MIT). This allows more than stability of our textiles, but also continuous improvements. After exporting fabrics to garment factories in Africa and Latin America for CMT, these garment factories produce more than 10 million pieces of functional garments annually. We therefore are the largest fabric supplier for the sports apparel market in North America.
- III. Committed to functional textiles and sustainable production and management: we have certifications by a number of international parties, R&D licenses, and variety patents from the functional fabrics we developed. We provide textiles customization and sustainable functional fabrics thus creating unique products for the market. Chung Ming uses the latest technology and equipment to reduce energy consumption thus creating less pollution. By reaching out to a wider customer base online and offline, we cater to the overall needs of our customers and enhance the value of our products.

Operation Management

- I. R&D Management: Our product innovation and development are ahead of market demand. It has been repeatedly reviewed and affirmed by Taichung City Government, the IDB and SBIR of the Ministry of Economic Affairs, and the Bureau of Foreign Trade of the Ministry of Economic Affairs.
- II. Production and Operation Management: Use intelligent manufacturing equipment to effectively improve and optimize quality production rates. We will continue sustainable environmental protection, reduce carbon emissions, install air pollution control and waste water facilities, and obtain environmental protection licenses.
- III. Financial Management: Importing enterprise resource planning system (ERP) to improve data management and review costs, risks and inventory.
- IV. Future Prospects: "Researching while having ideas; developing while doing research." Mastering the production quality with integrity. By strengthening the industrial supply chain cooperation of upstream, midstream and downstream to drive the business and improve overall performance.
