Introduction

Founded in 2010, Novakon Co., Ltd., a subsidiary of the domestically listed industrial PC manufacturer – iBASE Technology (TPEX: 8050), is a dedicated HMI (Human-Machine Interface) and IIoT (Industrial Internet of Things) software developer and hardware manufacturer. Our exceptional customized services provide clients with a wide array of software tailor-made solutions. As testament to the true value of MIT R&D and manufacture, not only do we offer customized software and hardware ODM services, but we are also committed to providing the best product functions and services for different industrial applications. Novakon

focuses on long-term R&D investment to reduce the cost of introducing automation measures in addition to meeting the needs of various vertical applications.

Export Competitiveness

Novakon's software and hardware are 100% developed and manufactured in Taiwan, marketed globally in 18 countries with overseas sales ratio of over 90% of the total business. We offer software integration solutions with two software brands "iFace Designer®" and "iM-Connect®" to expand our presence in the global automation industry. By dedicating years of experiences in software and hardware OEM/ODM businesses, we position ourselves as a solution provider for smart manufacturing and digital transformation. Novakon's solution has made its way to stand out of competitions and been recognized globally. We are also proud to be part of the supply chain of a leading global energy management OEM and in 2023 we became the first certified edge device partner of Siemens Industrial Edge Platform in Asia.

Operation Performance Management

Novakon has a long-standing commitment to meeting our customers' needs in the field of HMI technology within the automation industry. Our dedication to technical expertise is unwavering, ensuring that we deliver specialized solutions without compromise. We pass on our field application experiences and knowledge to R&D engineers, integrating it into product planning and development to create a continuous cycle of product enhancement. By introducing IT (Information Technology) technologies and combining decades of expertise in OT (Operation Technology) Novakon's solution align with the industry's trends and standard in IT/OT conversion, serving as a bridge at the edge, enabling the communication between customer's production floor and IT management systems. Many years of OEM/ODM customization projects and strategic alliances with solution partners have made Novakon leap through the conventional framework of standardized solution, bringing remarkable business result along these years.

Novakon is a people-centric company, catering to both our customers and employees. Our workforce boasts rich experience, professional expertise, and

boundless enthusiasm, allowing us to provide first-rate and user-friendly solutions to our customers. We assist customers in optimizing their processes through the integration of software, hardware, and technical services. By connecting people, machinery, and technology, we empower our customers to achieve their goals and gain a competitive edge in the digital era.

Sustainable Management

In response to the global trend towards net-zero carbon emissions, together with our parent company, Novakon joins the carbon reduction guidance program held by the Corporate Synergy Development Center (CSD), with the aim of achieving a carbon reduction equivalent to the annual amount absorbed by 2.5 Daan Park by the end of this year, taking strides towards a sustainable path to achieve net-zero emissions.

Novakon emphasizes a people-centric culture, considering all our colleagues as one big family. We provide various welfare measures, educational and training programs, care services, and uphold rights related to gender equality in the workplace. We are also a member of the Family-Friendly Corporate Alliance, promoting harmony between our employees' families and their work lives. Moreover, Novakon has become a member of the Intelligent Computer & AIoT Association (ICAA). Our goal is to leverage our expertise and technology to assist various domestic industries in their applications, thereby enhancing industrial division of labor and ultimately increasing our international competitiveness.
