

BiotiCircular Water-Storing Tree Planter

Protect Saplings to Create a Forest

- The Water-Storing Tree Planters, take their design inspiration from the shape of Chinese gold ingots, which symbolize the accumulation of wealth.
- The water-storing planter, with a string-drip irrigation design, improve the survival rate for planted saplings.
- With a water storage capacity of 15 liters, the planter protects saplings at the stage when they most need it.
- A special bio-degradable design protects the planter's structure made from recycled paper, allowing it to store water.
- Continually collecting and storing rainwater, the planter can protect tree saplings for up to a year*. (see note below)
- The planter will biodegrade completely into the soil, leaving behind no burden to the environment!

Six Powers for Reforestation

1. **Water Storing Power:** It can store up to 15 liters of water, making it perfect for sandy areas, forests, and other areas with scarce water resources.
2. **Water Collecting Power:** The patented water collecting hole effectively collects rainwater to replenish stored water.
3. **Protection Power:** The patented natural design increases the hardness and durability of the planter. The planter basin blocks wind, sunlight, prevents the growth of weeds, and maintains moisture, hastening the growth of tree saplings.
4. **Labor Saving Power:** The string automatic drip irrigation saves the labor of manual watering and weeding, greatly increasing sapling survival rates.
5. **Cost Saving Power:** This product saves a variety of costs, including: irrigation and weeding labor costs, irrigation truck costs, water costs, etc.
6. **Eco-friendly Power:** This product is friendly to the environment, made out of natural materials which decompose into the soil, providing nutrients for the growing tree.

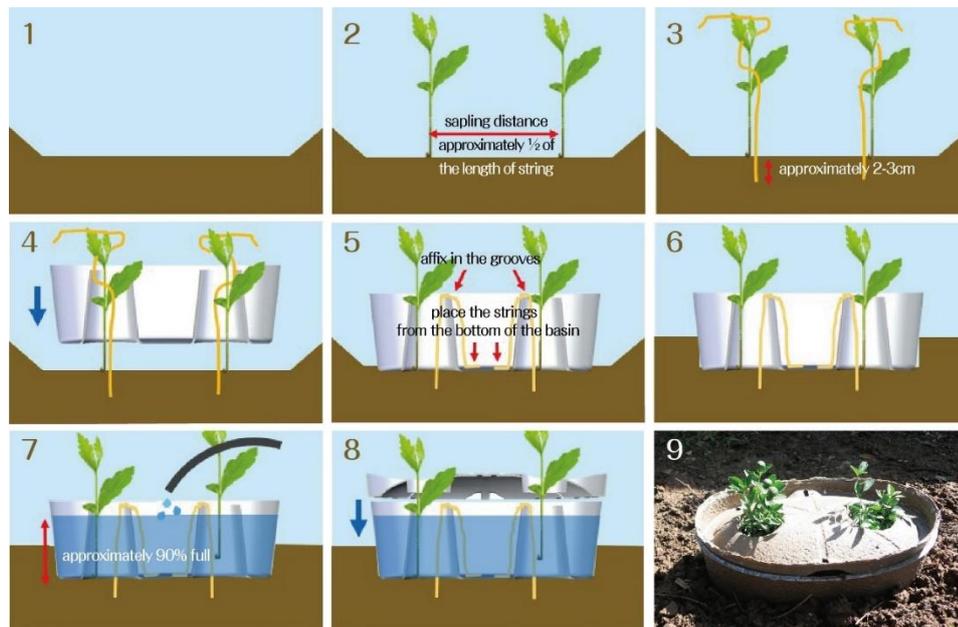

Vitalize Tree Planting with this Patented Design

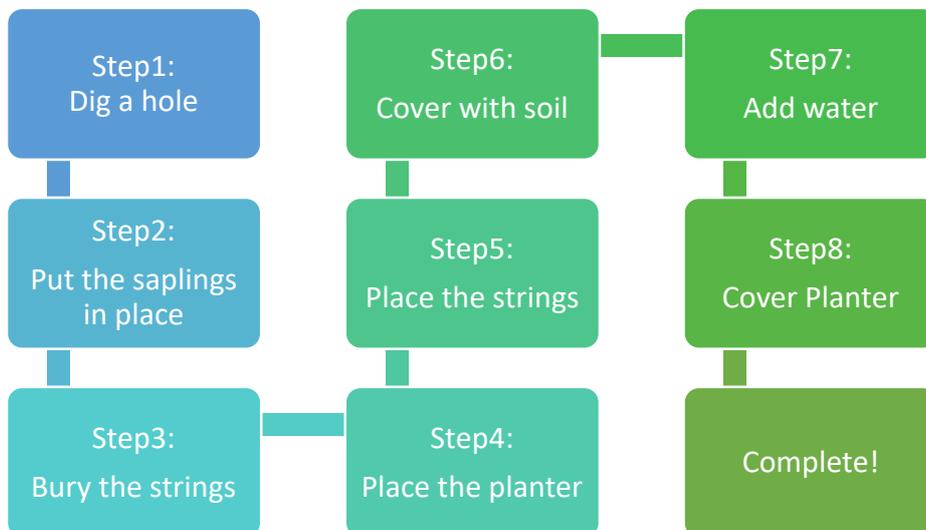

Designed, developed, and manufactured in Taiwan, the design is the design holds utility model patent

Suitable Uses for the Product:

1. Eco-friendly tree planting projects
2. Cultivating valuable tree species
3. Companies planting trees in exchange for carbon rights

The Water-Storing Tree Planter in 8 Simple Steps

Protect Saplings to Create a Forest

The water-storing planter,
with a string-drip irrigation design,
improves the survival rate for planted saplings.

It also blocks wind and sun, prevents weed growth,
and enhances the growth speed of tree saplings.

Vitalize tree planting, speed up reforestation.

Product Application Info

Precautions:

- Note: The time it takes for decomposition depends on soil status, humidity, temperature, and other factors.
